

Download and open the transformations in the folder, keeping the CSV files in the same folder.

The transformations should run automatically without needing to change the pathname. In case it doesn't work, put the CSV files in the same folder as the transformations and on the CSV file input steps type:

*`${Internal.Entry.Current.Directory}/data_input/german.subsidies.recipient.csv`*

OR

*`${Internal.Entry.Current.Directory}/data_input/german.subsidies.payments.csv`*

The table output should work automatically if you have the default password set.
